Free chapter: AI daily brief to your Telegram

What you build: every morning, n8n reads your feeds, an AI model summarizes them, and the brief lands in your Telegram chat.

1. Import daily-brief-workflow.json into n8n (Workflows > Import from file).
2. Set your feed URL in "Read feed".
3. Add OpenAI credentials to "Chat model".
4. Create a bot with @BotFather, add its token as Telegram credentials, and put your chat id in "Send brief".
5. Run it once with "Test workflow", then activate it.

PLACEHOLDER: replace with the finished, tested chapter before launch.
